Preparation / training (offline)
Labelled pages and transcripts
Line preparation and training
Reader / writer model weights
Glyph extraction and style measurement
Persistent writer profiles
Recognising a photographed page
Page / camera photograph
Conditioning and line segmentation
Reader and writer inference
Text and writer + per-line detail
Generating handwriting from new text
New text + selected profile
Glyph layout and candidate selection
Trajectory to G-code
Gantry execution
Models score candidates; ordinary recognition does not train models or build profiles.
